

“Motivity™ - a robust feature packed mobile data solution that links to the Liftdata Lift Maintenance software letting you manage your field workforce and processes more efficiently and cost effectively.”

Using the latest handheld technology, Motivity™ reduces the usual paper, fax and voice communication you need to carry out job management, field work, reporting and administration tasks.

Motivity™ can be used on a wide variety of Windows based Smartphone - Personal Digital Assistants (PDAs) through to rugged handhelds to suit the needs of your business.

Main Features

Rapid Job Despatch

Breakdown and repair jobs are sent quickly to engineers direct from Liftdata office system.

Monitor Job Progress

Office staff are constantly updated with job progress from the job arriving on the PDA, through to job completion.

Easy To Use Mobile Software

Simple screens using point and tap operation and drop down lists to save typing.

Service Routes to Hand

Engineers can view their entire service route with last service dates. The PDA automatically updates when there are changes to routes.

Create Out of Hours Calls Quickly

Breakdowns can be raised immediately on an engineer's PDA using a searchable portfolio of lifts.

Rapid Job Completion

Completed jobs 'sheets' arrive directly in Liftdata for review without any paperwork. Jobs can be completed in seconds.

Signature Capture

Both customer and field staff sign on the PDA screen when job is complete.

Adobe PDF Job Sheet

System automatically creates an Adobe PDF job sheet complete with embedded signatures. These can be e-mailed from Liftdata as soon as the job is completed.

Multi Service – One Signature

Carry out multiple services at one site and get one customer signature at the end. All sheets are automatically sent back to your office.

Password Protection

Software is password protected to stop unauthorised access. Passwords can be changed remotely too.

No Signal – No Problem

Continue using the mobile software without a permanent mobile phone signal

Custom Form Service

We offer a customisation service for additional PDA and electronic forms you may need.

Out of Hours Call Centre

If you use Totally Inbound to handle your out of hours calls, the system will allow jobs to be sent directly to engineers from their call centre.

Secure Reliable Service

Motivity is used by small businesses through to local authorities who rely on the service for their daily field work.

Designed specifically for business use, Motivity™ is a 'push-based, real-time' solution. This means that information is pushed to and from the handheld devices, in a similar manner to receiving a text message on your mobile phone. You do not need to manually update your device or carry out any synchronisation processes.

Motivity™ is a truly self-contained application and is designed to cope with the varying quality of mobile phone service. This means that field staff can still complete any jobs they have on their PDA even with breaks in the mobile phone signal. Their work will be transmitted back when the signal returns
